

Not sure whether this is a bug or not.

If I use the following markup link:

[[https://savannah.gnu.org/task/?task\\_a#commentnum](https://savannah.gnu.org/task/?task_a#commentnum) comment#num]

and the link is used under *task\_b*, where *task\_a* and *task\_a* differ, then the link is changed into:

[[https://savannah.gnu.org/task/?task\\_b#commentnum](https://savannah.gnu.org/task/?task_b#commentnum) comment#num]

that is to say, the link text, ie *comment#num*, supersedes the link url ie [https://savannah.gnu.org/task/?task\\_b#commentnum](https://savannah.gnu.org/task/?task_b#commentnum).
